

WHO WE ARE...

We are a group of volunteers who give their time in an effort to improve our waterways through a coordinated campaign of education, water quality monitoring and skills development.

Four Rivers Watershed Watch NEEDS YOUR HELP!

Consider becoming a Four Rivers Watershed Watch volunteer!

Attend a **FREE** training session and select a site you are interested in monitoring and we will provide you with all necessary equipment at **NO COST TO YOU**.

Contact Maggie Morgan at the number listed below to become a volunteer.

Consider sponsoring a monitoring site in your area!

The annual cost per site is **\$100** which includes lab costs for samples, replenishment of field test kits, mailing and container costs. The cost per site for a *new* volunteer is **\$250** which includes new field test kits, lab costs for samples, mailing and container costs. Four Rivers Watershed Watch covers these costs at no cost to the volunteer.

MAIL THE ATTACHED FORM WITH YOUR DONATION. YOUR SUPPORT WILL ENSURE THE CONTINUED EFFORTS OF FOUR RIVERS WATERSHED WATCH TO MONITOR OUR WATERWAYS AT NO COST TO OUR VOLUNTEERS.

YOUR SUPPORT IS GREATLY APPRECIATED!

FOUR RIVERS WATERSHED WATCH

WHAT WE DO...

- Our goal is to educate the citizens about the value of clean water and the importance of our waterways by getting people into the water and in touch with their environment.
- We promote cooperation among citizens, educators and agencies to keep our waterways clean and identify specific areas in need of further investigation.
- We conduct training sessions on the program and methods we use to collect data. All volunteers are required to attend this training session before collecting data.
- Volunteers select a site and we provide all necessary supplies and materials for monitoring at no cost to the volunteer.

- We provide technical assistance to volunteers dealing with the issues raised by their monitoring and assessment efforts.
- We conduct a fall conference annually where individuals, community organizations, scientific researchers and agency personnel all come together to discuss the condition of our waterways as revealed by our monitoring.

What we do best is deliver science to the people, then deliver the people to the water's edge. There they learn first hand the condition of their streams, who in their community shares their concerns and the power they have to affect change.

HERE ARE THE SITES WE MONITOR:
